# How does **AI for Tableau Server** work?

# Agentic Development for Power BI & Fabric Creators

Leveraging AI agents + skills to help Power BI & Fabric creators build analytics solutions from scratch or improve existing ones

## Step 1: Connect to Power BI Desktop and create a new semantic model

The screenshot shows the Power BI Desktop interface. The top ribbon includes 'File', 'Home', and 'Help'. The 'Home' tab is active, showing options like 'Get data', 'Refresh', 'Manage relationships', 'New measure column', 'New table', 'Calculation group', and 'New parameter'. The 'Data' pane on the right lists the following tables: Accounts, Actions, AISuggestions, BuildVersion, Campaigns, Clients, CompanyStatus, CustomerLoyalty, DataReasoning, Date, Days to close, Devices, Discount, ErrorLog, Finance, Industries, Media, Numbers, Opportunity, Owners, and Pipeline. The 'Properties' pane on the left shows the structure of the 'CompanyStatus' table, including fields: Address, Comment, Company, Country, Email, Name, Phone, State, Status, and Collapse. The bottom status bar shows 'All tables' and a '+' button.

## Connect To Running Desktop Instance

```
table_operations (MCP: powerbi-modeling-mcp) · request: {...}
  ↳ {"success":true,"message":"Found 28 tables","operation":"List",...}

relationship_operations (MCP: powerbi-modeling-mcp) · request: {...}
  ↳ {"success":true,"message":"Found 18 relationships","operation":"...}

measure_operations (MCP: powerbi-modeling-mcp) · request: {...}
  ↳ {"success":true,"message":"Found 13 measures across all tables"...}
```

The semantic model is complete. Here's a summary:

Semantic Model: Translytical CRM/Pipeline

Source: Fabric SQL Database [Translytical](#) (Import mode)

| Component     | Count                                            |
|---------------|--------------------------------------------------|
| Tables        | 28 (3 fact, 15 dimension, 10 other/utility)      |
| Relationships | 18 (all one-direction, many-to-one)              |
| Measures      | 13 (8 Opportunity, 4 Finance, 1 CustomerLoyalty) |
| Hierarchies   | 2 (Date Hierarchy, Geography)                    |
| Parameters    | 2 (Server, Database)                             |

### Key measures created:

- Opportunity: Total Value, # Opportunities, Avg Days to Close, Avg Probability, Total Quantity, Avg Days Open, Avg Value, Total Discount
- Finance: Revenue, Total Budget, Variance, Variance %
- CustomerLoyalty: Avg Percent Used

Note: The [Measures](#) table was skipped (reserved name in Power BI). The model data needs a refresh to load data from the SQL database. Would you like me to trigger a refresh?

## Build Announcement

# RAYFIN

- Open source SDK and CLI
- Build production-ready apps ontop of Fabric

```

[RAYFIN]

Let's create your project.

? Select a template: Blank App - Bare-bones Fabric-authenticated React + Vite app - sign-in, routing, and a placeholder
? Project name: delivery-app

Creating project "delivery-app" (delivery-app) from "Blank App" template

✓✓ Template files copied
✓✓ Template customized
✓✓ Dependencies installed
(Use 'node --trace-deprecation ...' to show where the warning was created)
✓✓ Scaffolding files synchronized

❖ Project created successfully!

Next steps:

cd delivery-app
npx rayfin up
npm run dev:fabric

PS C:\Users\adelevance> cd delivery-app
PS C:\Users\adelevance\delivery-app> npx

```

So Rayfin is this open source SDK and CLI that is gonna help developers

## How Genie Ontology works

## DAIS Registration Numbers Query

Share

As of today, **82,275 total registrations** are recorded for the Data + AI Summit 2026 (DAIS 2026), spanning roughly 80,200 unique registrants.

2

82,275

total registrations

28,987

in-person

53,288

virtual

This uses the same definition as the DAIS 2026 Sales Dashboard's "Total Registrations" tile — the sum of the `registered` measure from `main.marketing_lakehouse.rpt_summit_registration`, scoped to DAIS 2026 ( `program_group ILIKE '%fy%27%'` ). 1 1

A few notes for context:

- **Total vs. unique:** The 82,275 figure counts registration records; there are ~80,222 unique registrants ( `audience_id` ), since a small number of people register for more than one program (e.g., main event + Executive/CIO Forum). 1
- **Scope:** This includes both in-person and virtual registrations across all DAIS 2026 programs (Main Event, Executive Forum, CIO
